EDUCATION

Bachelor, Tecnológico de Antioquia, Medellín
2025

- Web Programming and Application Development.
- Object-Oriented Programming (OOP).
- Data Analysis and Real-world Project Application.
- Software and Backend Development with Python, Java, HTML, CSS, JavaScript, and C#.
- Agile Project Management (Scrum).
- Artificial Intelligence (AI) and Machine Learning (TensorFlow).
- Networking and Infrastructure Management.
- Version Control using GitHub.

SKILLS

Project Management

Problem Solving

Microsoft Excel

Data Analysis

SQL

ABOUT ME

As a results-driven Software Engineer and Backend Developer, I bring over five years of experience in software and web development projects within the IT industry. My expertise lies in backend development and Robotic Process Automation (RPA) solutions, with proficiency in multiple programming languages including Python, Java, JavaScript, SQL, and C#. My primary focus is on delivering scalable and efficient solutions through effective project management, data analysis, problem-solving, and cross-functional collaboration. I have a proven track record of achievements, such as implementing automated processes that cut computational resource usage by 30% and leading the automation of a critical manual process that resulted in a 40% annual reduction in workload.

WORK EXPERIENCE

semi senior, 2NV, Medellín

Oct 2023 - Aug 2025

- Spearheaded the automation of a critical manual process, achieving a 40% annual reduction in workload
- Designed, developed, and tested robotic process automation (RPA) bots using Automation Anywhere and UiPath platforms
- Authored comprehensive documentation including user manuals, workflow charts, and process diagrams
- Conducted thorough unit, integration, and performance testing to ensure robustness and efficiency of automation solutions
- Analyzed existing processes to identify and implement optimization opportunities
- Applied Agile methodologies, specifically Scrum, to effectively manage project lifecycles
- Engineered automation processes that decreased computational resource usage by 30%

Junior, Softtools, Medellín

Feb 2021 - Sep 2023

- Developed and maintained full-stack solutions for enterprise applications, enhancing business operations.
- Optimized database operations by creating stored procedures, functions, views, and indexes.
- Managed version control using GitHub, ensuring efficient tracking and collaboration on code changes.
- Automated recurring tasks by designing and maintaining job scripts, increasing operational efficiency.
- Applied design patterns to ensure code modularity and scalability, contributing to long-term project success.

PERSONAL DETAILS

Date of birth
16 Apr 2000

Nationality
Colombiano

Marital status
Soltero

- Achieved process execution time reductions by implementing efficient scripts and automated jobs.

Auxiliar de Software, IoSoft, Medellin

Jun 2019 - Jan 2021

- Developed web and backend solutions for internal projects, enhancing functionality and system performance.
 - Implemented new features and optimized existing systems to improve scalability and maintainability.
 - Wrote clean, scalable code in Python, JavaScript, and C# adhering to best practices.
 - Designed user interface mockups in Figma to guide front-end development and enhance user experience.
 - Collaborated on project documentation utilizing tools such as Confluence, Jira, Miro, and Azure DevOps.
 - Applied Agile methodologies, particularly Scrum, to ensure milestone achievements and project deliverables.
 - Contributed to the development of digital document signing services using Python and AWS storage libraries.
